

**Report From G-QRP Club  
For The Spectrum Forum Meeting  
To Be Held 29<sup>th</sup> October 2016  
Prepared By Dominic Baines M1KTA**

**A Brief Introduction To G-QRP**

The Club has many thousands of members around the world and reflects their interest in low power communication. A high percentage of members use home-made equipment and the Club is highly regarded as being one of the few remaining bastions of home construction, publishing and supporting a range of circuits and project ideas. The activities of members on the bands tend to be low profile and have little impact on others.

In addition to various on-air events, the Club organises a very popular annual QRP Convention which attracts visitors from overseas, as well as around the UK

**Spectrum Concerns:**

Some recent Dxpeditons have put the pile up for a week or more over the QRP CoA frequencies.
