

**Report From G-QRP Club  
For The Spectrum Forum Meeting  
To Be Held 28<sup>th</sup> October 2017  
Prepared By Dominic Baines M1KTA**

**A Brief Introduction To G-QRP**

The Club has many thousands of members around the world and reflects their interest in low power communication. A high percentage of members use home-made equipment and the Club is highly regarded as being one of the few remaining bastions of home construction, publishing and supporting a range of circuits and project ideas. The activities of members on the bands tend to be low profile and have little impact on others.

The club no longer holds it's own annual QRP Convention. Several club members have talked at club, national and international meetings on varied topics from technical to operating and these are always well attended.

**Spectrum Concerns:**

As per 2016, some recent Dxpeditons have put their pile up for a week or more over the QRP CoA frequencies.
