Dear

I have pleasure in sending you the enclosed Amateur (Sound) Licence B. The call sign allocated to your station is G8 .....

You will see that clause 3(2) of the licence requires that equipment for frequency measurement shall be provided capable of verifying that the sending apparatus comprised in the station is operating with emissions within the authorised frequency bands. The enclosed Table gives guidance on the requirements of frequency measurement equipment to ensure compliance with the provisions of this clause.

Clause 4(1) of the licence requires that the apparatus comprised in the station shall be so designed, constructed, maintained and used that the use of the station does not cause any undue interference with any wireless telegraphy. In this connection your attention is drawn particularly to the guidance about siting of aerials given in note (c) to the licence.

/In

In connection with clause 9(3) of the licence you will see that note (p) to the licence recommends the use of the phonetic alphabet set out in that note when the letters of the call sign are transmitted phonetically.

In view of the difficulties which are frequently experienced in effecting delivery of communications, particularly renewal accounts, to holders of amateur licences, your attention is drawn to note (a) to the licence. Furthermore, any proposal to change the main address referred to in clause 1(1)(a) of the licence must be notified to the Postmaster General and his consent obtained by amendment of the licence to the establishment and use of the station at the new main address.

If in the future you should wish to transmit on frequencies in the amateur service below 144 Mc/s you would first have to obtain an Amateur (Sound) Licence A with a call sign in the G3 series currently in use for such licences. Before such a licence could be issued to you, however, you would have to pass the Post Office 12 words per minute morse sending and receiving test.

Yours sincerely,
