

ESTABLISHMENT AND USE OF AMATEUR RADIO EQUIPMENT IN STATIONARY AND MOVING VEHICLES

The following note clarifying the requirements and provisions relating to establishment and use of amateur radio equipment in moving vehicles and moveable vehicles when stationary should be associated with your Amateur (Sound) Licence:-

'At "the main address", "the temporary premises", "the alternative premises", and "the temporary location" (see clause 1(1)(a)) the Station may be established and used in a stationary vehicle. In those circumstances the Licensee may utilise the vehicle battery to supply power to the Station and/or temporarily affix the aerial to the vehicle. This Licence does not authorise the establishment OR use of the Station in a moving vehicle (see clause 1(2)(a)). If the Licensee does not hold an Amateur (Sound Mobile) Licence he must ensure that if he transports a Station in a moving vehicle (eg to a temporary location) the Station (including a handportable Station) is rendered incapable of use while being transported. Acceptable means of doing this for portable apparatus would be to remove the battery. For apparatus operated from a separate power supply (eg the vehicle battery) the connecting leads should be removed and kept quite separate from the remainder of the apparatus.'
