IBP = International Beacon Project. Beacons transmit for ten seconds on each frequency in turn in the sequence shown above. They send callsign at 22 wpm and 100 watts, then four 1-second dashes at 100w, 10w, 1w and 0.1w. Equipment is TS-50, Cushcraft R-5 multiband vertical and a Trimble Navigation GPS receiver to ensure synchronization, with a control unit built by NCDXF.

## DK0WCY/DRA5

zz DK0WCY 3579 operates 0720-0900UTC and 1600-1900UTC LOCAL time (ie UTC+1 winter and UTC+2 summer) DRA5 and DK0WCY on 10144 are currently part-time. Transmissions on 3579 are cw only, with beacon id interrupted at ten minute intervals by a datagram giving the Kiel K, current fof2 and MUF at Juliusruh and indications of current solar-geophysical events. DRA5 and DK0WCY on 10MHz carry the cw datagrams but, at 10 minutes after the hour, the datagram transmission is on RTTY and contains additional information on x-ray background and hf2, using RTTY. The H+50 transmission is PSK31(BPSK) is used. During auroral events the carrier at the end of the ID changes to a series of dots. See also [www.dk0wcy.de](http://www.dk0wcy.de).
